CS157A – Project-Milestone 3

Minh An Cao, Ricky Singh, Alexander Nguyen

1. Server side code (procedures, functions, triggers, views) for the chosen module. At least a couple of them. Final script for creating the database, tables, constraints, indexes and loading the sample data.

Server side code is in the script files folder in serverSideCode.sql and indexes.sql.

2. Client side code for the chosen module. Include simple GUI, connectivity libraries to database and application logic.

Client side code is in ClothingStoreDB folder with all the .php files.

3. Presentation (around 10 minutes) on the final results and preferably including demo on the running system. Choose day: 11/29, 12/4 and 12/6 and declare it on Discussion forum:

Shortly present your application area and design, present your implementation results and your running system.

Presentation slides is presentation.pptx file.

4. Final report: Milestone 0 + Milestone 1 (revised) + Milestone 2 + Milestone 3.

Include a document with instructions or readme file on how to deploy and use your application. The code must run according to the instructions and chosen platform.

All reports and setup program.txt is in Final Report + setup program.txt folder.

5. In order to get credit each member of the team has to assess contributions of each team member of their group. Assume there is 30 in total, and assign points to each member of the group including yourself that reflect their overall contribution to the project (for example, me - 10, <Member 2 Name> - 15, <Member 3 name> - 5). Please enter contribution as text entry on: <u>Peer Assessment</u>. Assigned point must sum up to 30. Final individual grade for the project will take into account peer assessment.

Minh An - 10, Alexander - 10, Ricky - 10
